Charis SIL 4.114 (maintenance release)

This maintenance release of Charis SIL doubles the speed of rendering lower ASCII text in Graphite. Thus, when  Mozilla Firefox/Gecko (version 24+) or a future version of LibreOffice is used, then this font will be much faster. We have produced this special release of Charis SIL in order to support Gecko on low end rendering engines like phones running FirefoxOS. Our other Roman fonts ([Doulos SIL](#), [Andika](#), and [Gentium](#)) have not yet been optimized in this way.

Known Issue: Unfortunately, the font does not render properly in OpenOffice. If you wish to use this new version of the font, please use  LibreOffice instead. If you wish to continue using OpenOffice you must use an older version of the font.
